
Simulation study

Gorica Evidence Synthesis

Setup

$$H_0: \beta_3 = 0$$

$$H_1: \beta_3 > 0$$

$$H_2: \beta_3 < 0$$

Performance Indicators

1. GORICA weights
2. True hypothesis rate
3. Relative support

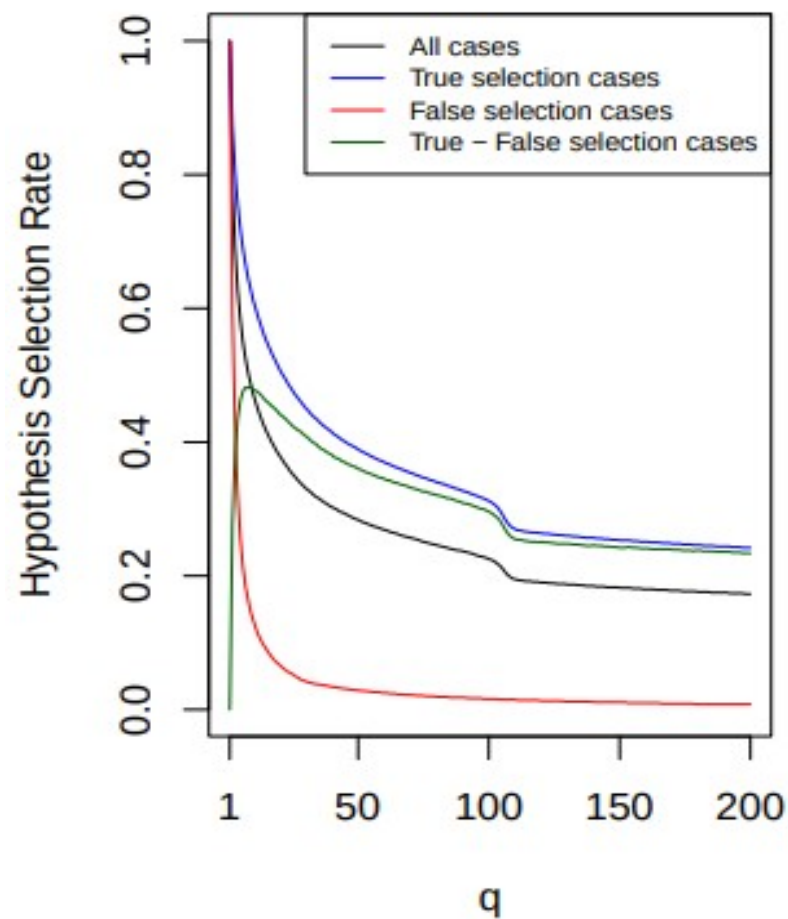

Design Factors

1. Sample size
2. Hypothesis set
3. Study heterogeneity
4. Population effect size
5. Multicollinearity
6. Relative predictor importance

Main results

Main results

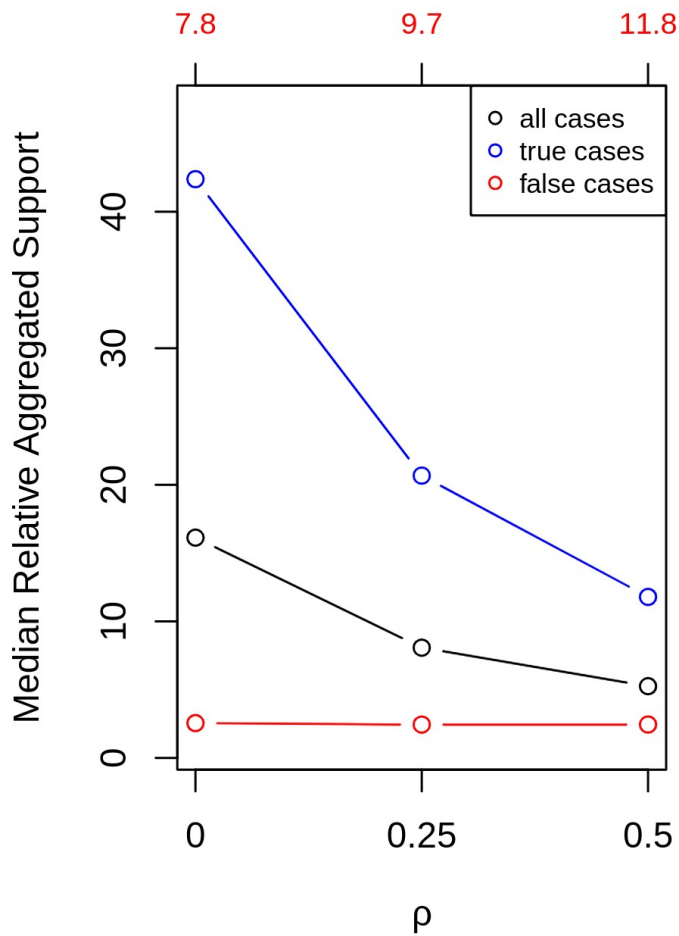

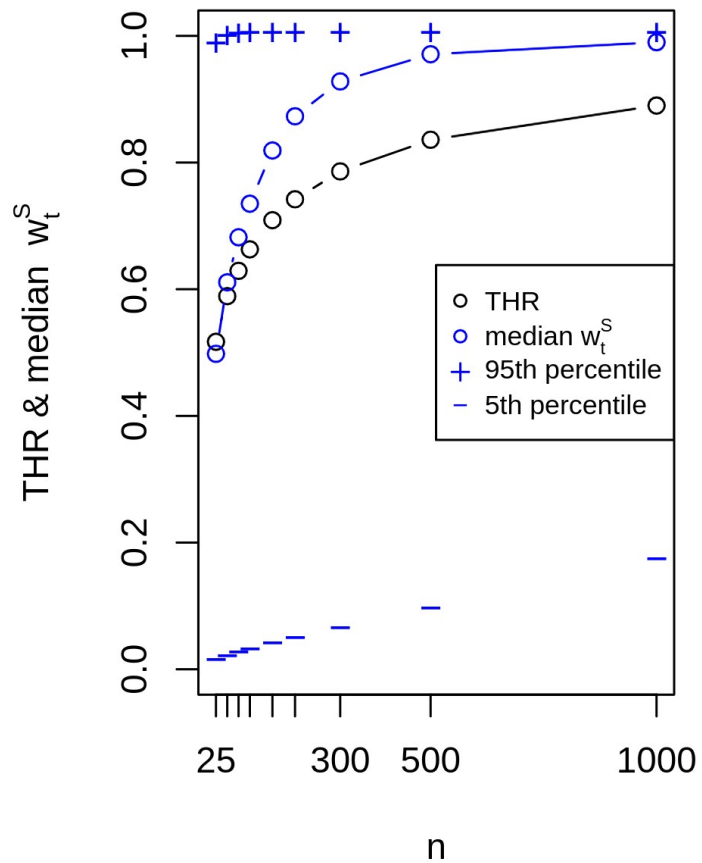

Conclusion

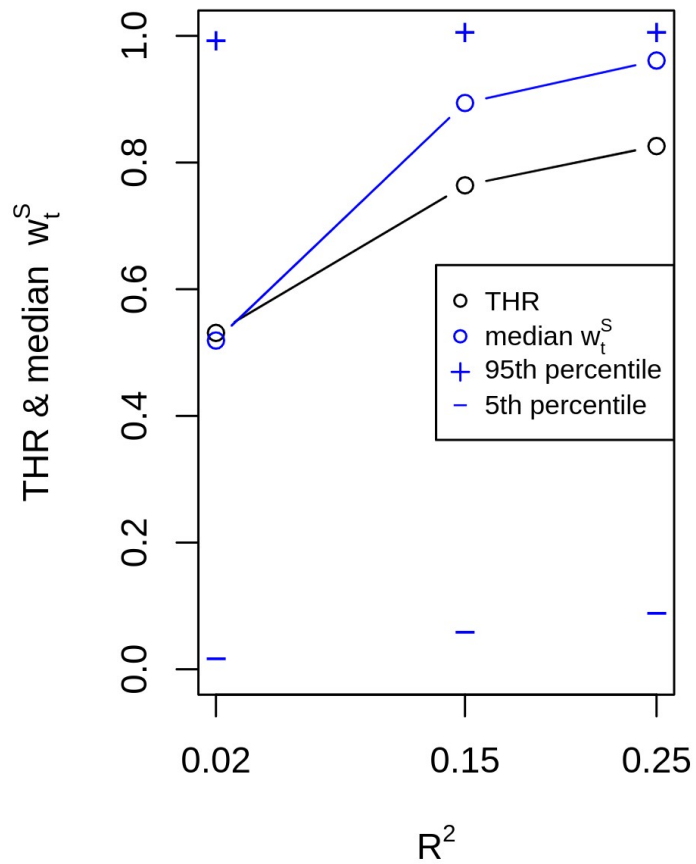

- Viable confirmatory method
- A priori threshold

Addenda

TABLE 3 Performance of GORICA evidence aggregation for different hypothesis sets.

Set	THR	median w_t^S	percentiles w_t^S		MRAS		
			5th	95th	all	true	false
Set 1	.72	.91	.12	1.00	11.5	157	2.38
Set 2	.70	.74	.02	.99	6.59	11.5	2.60
Set 3	.42	.26	.00	1.00	5.22	18.0	3.36
Set 4	.92	.99	.38	1.00	77.0	149	1.90
Set 5	.76	.77	.06	.99	4.83	9.67	1.71
Set 6	.45	.33	.02	1.00	4.25	14.6	2.74
Set 7	.92	.99	.38	1.00	77.0	149	1.90
Set 8	.90	.95	.26	1.00	18.7	21.7	2.96
Set 9	.78	.83	.25	1.00	5.70	11.3	1.82

Abbreviations. True Hypothesis Rate (THR), median aggregated GORIC(A) weight for the true hypothesis (median w_t^S), Median Relative Aggregated Support (MRAS) for the true hypothesis over all cases (all), for the true hypothesis over only the true selection cases (true), and for a false hypothesis over only the false selection cases (false).

TABLE 4 Performance of GORICA evidence aggregation for statistical model diversity.

Diversity condition	THR	median w_t^S	percentiles w_t^S		MRAS		
			5th	95th	all	true	false
Homogeneous-equal	.71	.84	.04	1.00	8.61	22.2	2.50
Homogeneous-unequal	.70	.82	.03	1.00	8.18	22.1	2.46
Heterogeneous	.71	.83	.04	1.00	7.90	19.9	2.45

Abbreviations. True Hypothesis Rate (THR), median aggregated GORIC(A) weight for the true hypothesis (median w_t^S), Median Relative Aggregated Support (MRAS) for the true hypothesis over all cases (all), for the true hypothesis over only the true selection cases (true), and for a false hypothesis over only the false selection cases (false).

TABLE 2 Performance of GORICA evidence aggregation for different ratios of relative predictor importance.

Ratio of β s	THR	median w_t^S	percentiles w_t^S			MRAS	
			5th	95th	all	true	false
4:2:1	.76	.91	.05	1.00	13.3	32.1	2.51
1.77:1.33:1	.66	.74	.03	1.00	5.76	13.5	2.45
4:3:2:1:0	.66	.74	.03	1.00	5.88	13.6	2.60
1:2:3:4:0	.74	.89	.02	1.00	12.7	42.9	2.28

Abbreviations. True Hypothesis Rate (THR), median aggregated GORIC(A) weight for the true hypothesis (median w_t^S), Median Relative Aggregated Support (MRAS) for the true hypothesis over all cases (all), for the true hypothesis over only the true selection cases (true), and for a false hypothesis over only the false selection cases (false).
